

What is Claimed is:

1. A powder batch comprising cathodoluminescent phosphor particles, wherein said particles have a weight average particle size of from about 0.1 μm to about 10 μm and have a substantially spherical morphology, wherein at least about 80 weight percent of said particles are not larger than about two times said average particle size.
2. A powder batch as recited in Claim 1, wherein said particles have a weight average particle size of from about 0.3 μm to about 5 μm .
3. A powder batch as recited in Claim 1, wherein said particles have a weight average particle size of from about 0.3 μm to about 3 μm .
4. A powder batch as recited in Claim 1, wherein said particles comprise Y_2O_3 .
5. A powder batch as recited in Claim 4, wherein said particles further comprise Eu.
6. A powder batch as recited in Claim 1, wherein said particles comprise $\text{Y}_2\text{O}_2\text{S}$.
7. A powder batch as recited in Claim 6, wherein said particles further comprise a dopant selected from the group consisting of Eu, Tb and combinations thereof.
8. A powder batch as recited in Claim 1, wherein said particles comprise ZnS .
9. A powder batch as recited in Claim 8, wherein said particles further comprise a dopant selected from the group consisting of Au, Al, Cu and combinations thereof.
10. A powder batch as recited in Claim 8, wherein said particles further comprise a dopant selected from the group consisting of Ag, Cl and combinations thereof.
11. A powder batch as recited in Claim 1, wherein said particles comprise SrGa_2S_4 .
12. A powder batch as recited in Claim 11, wherein said particles further comprise a dopant selected from the group consisting of Eu, Ce and combinations thereof.
13. A powder batch as recited in Claim 1, wherein said particles comprise $\text{Y}_5(\text{Ga,Al})_5\text{O}_{12}$.

Please insert the following new page after page 81 of the specification.

33. A powder batch comprising Y_2O_3 phosphor particles, wherein said particles have a weight average particle size of from about $0.1 \mu\text{m}$ to about $10 \mu\text{m}$ and have a substantially spherical morphology, wherein at least about 80 weight percent of said particles are not larger than two times said average particle size.

34. A powder batch as recited in Claim 33, wherein said particles have a weight average particle size of from about $0.3 \mu\text{m}$ to about $5 \mu\text{m}$.

15. A powder batch as recited in Claim 33, wherein at least about 90 weight percent of said particles are not larger than two times said average particle size.

10 36. A powder batch as recited in Claim 33, wherein said particles comprise Eu as a dopant.

37. A powder batch as recited in Claim 33, wherein said particles comprise from about 4 to about 6 atomic percent Eu as a dopant.

15 38. A powder batch as recited in Claim 33, wherein said phosphor particles comprise crystallites having an average crystallite size of at least about 25 nanometers.

Please insert the following new page after page 84 of the specification.

54. A powder batch comprising Y₂SiO₅ phosphor particles, wherein said particles have an average size of from about 0.1 μm to about 10 μm and wherein said particles have a substantially spherical morphology, wherein at least about 80 weight percent of said particles are not larger than two times said
5 average particle size.

55. A powder batch as recited in Claim 54, wherein said particles have a weight average particle size of from about 0.3 μm to about 5 μm .

56. A powder batch as recited in Claim 54, wherein at least about 90 weight percent of said particles are not larger than two times said average
10 particle size.

57. A powder batch as recited in Claim 54, wherein said particles comprise a dopant selected from the group consisting of Tb and Ce.

58. A powder batch as recited in Claim 54, wherein said phosphor particles comprise crystallites having an average crystallite size of at least about
15 25 nanometers.

Please insert the following new page after page 98 of the specification.

152. A method as recited in Claim 143, wherein no more than about 0.1 weight percent of said phosphor particles are in the form of hard agglomerates.

153. A method as recited in Claim 143, wherein said phosphor particles have an average particle size of not greater than about 5 μm and wherein said particles have not been milled.

154. A method as recited in Claim 143, further comprising the step of adding water to said liquid during processing to maintain the precursor concentration below a predetermined value.
